

# DISCHARGER, ELECTROSTATIC, AIRCRAFT, TELESCOPING MSW100

The Mercatus **MSW100** (NSN: 5920-01-532-8280) Electrostatic Charge Removal Kit was designed specifically for Electrostatic charge removal from the F/A-18 aircraft canopy and windscreen in a manner that protects the user and minimizes the potential of scratching the canopy windscreen surfaces without climbing on the aircraft.

## Features

The user is able to reach the canopy and windscreen by means of a telescoping pole. The pole contains a single conductor cord connecting the conductive head mechanism to the ground cord set.

The ground cord set is used to provide an electrical connection between the telescoping pole to the ground point in the nose wheel well of the aircraft.

The conductive head mechanism has a conductive polyester cover fully surrounding a foam pad. The head mechanism has a secure angle setting and a four-way swivel capability to provide proper contact with the surface of the canopy windscreen.
